

CLOUD-CONNECTED VIDEO SECURITY

CONNECT ALL YOUR AVIGILON CONTROL CENTER (ACC) SITES TO THE CLOUD FOR SECURE, REMOTE ACCESS TO YOUR VIDEO FROM ANYWHERE

Avigilon Cloud Services (ACS) make it incredibly easy to remotely access video from all your ACC™ sites. Connecting ACC sites to the cloud allows organizations with multiple locations to centralize access to their ACC sites securely from a browser or mobile device. No special user configuration or complicated network changes are required, saving time and making it easy to access video from anywhere.

The process to connect ACC sites to the cloud involves three easy steps[1] and is available at no additional cost. By cloud-connecting, customers will benefit from continuous innovation as we add features like centralized system health monitoring and maintenance services.

TOOLS FOR EVERYDAY OPERATION

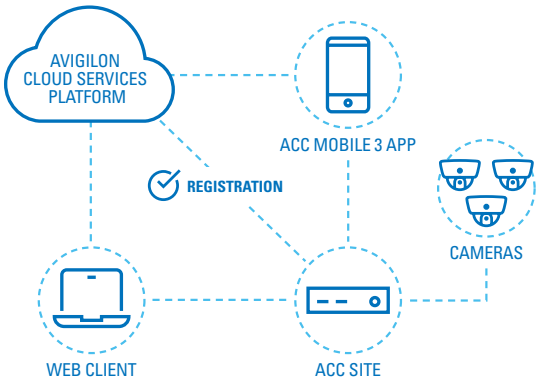

Remotely access live and recorded video, create and view bookmarks, manage PTZ controls, and export videos to a local drive.

SEAMLESS REMOTE ACCESS

Firewall traversal enables secure remote access with minimal or no firewall reconfiguration. Provisioning users is simple, as existing ACC group privileges persist for web client or mobile app viewing.

PLATFORM AGNOSTIC

Access from anywhere on Windows, Mac or Chromebook using a standard Chrome, Safari or Edge[2] browser, or from our ACC Mobile 3 app, available from the Google Play Store and Apple App Store.

MOTOROLA SOLUTIONS

AVIGILON™

[1] The number of steps may vary depending on the size of the organization. A minimum of ACC 7.4.4.14 and ACC 7.4.4.14 Web Endpoint Service or later are required to support ACS connectivity. It's easy and free for end users to register on the Avigilon Resource Center portal to download software updates and self-install.

[2] Microsoft Edge Chromium-based version 79.0.309+.
